Volume 6, Issue Nos. 1–4
International Journal for

NUMERICAL METHODS IN ENGINEERING

Issue No. 1, 1973

S. T. Wu: Unsteady MHD Duct Flow by the Finite Element Method 3

T. P. Khatua and Y. K. Cheung: Bending and Vibration of Multilayer Sandwich Beams and Plates . 11

C. Moore and J. Masliyah: Study in Particle Percolation: Computer Program 25

S. Utku: A Finite Element Method for Block Adjustment Problems of Photogrammetry . . . 33

F. Kikuchi: A Finite Element Method for Non-Self-Adjoint Problems 39

J. T. Oden and J. N. Reddy: Note on an Approximate Method for Computing Consistent Conjugate Stresses in Elastic Finite Elements 55

D. R. J. Owen, G. C. Nayak, A. P. Kfouri and J. R. Griffiths: Stresses in a Partly Yielded Notched Bar—an Assessment of Three Alternative Programs 63

P. P. Lynn and S. K. Arya: Use of the Least Squares Criterion in the Finite Element Formulation . 75

A. J. Baker: Finite Element Solution Algorithm for Viscous Incompressible Fluid Dynamics . . . 89

E. Ondracek and J. B. Haddow: A Numerical Method for the Analysis of Longitudinal Elastic-Plastic Stress Wave Propagation 103

D. R. J. Owen and A. Prakash: The Analysis of Dislocation Systems by the Finite Element Method . 117

K. K. Gupta: Solution of Quadratic Matrix Equations for Free Vibration Analysis of Structures . . 129

SHORT COMMUNICATIONS

D. L. Cronin: Numerical Integration of Uncoupled Equations of Motion using Recursive Digital Filtering 137

J. Barlow: On the Automatic Selection of Independent Displacement Variables in General Purpose Finite Element Codes 141

K. J. Bathe and E. L. Wilson: Discussion of a Paper by K. K. Gupta 145

R. D. Cook: A Note on Certain Incompatible Elements 146

F. Sawko and P. Merriman, W. S. Atkins & Partners: Comments on a Paper by S. Singh and G. M. Ramaswamy 148

Book Reviews 149

Letter to the Editor 152

Issue No. 2, 1973

R. H. T. Bates and F. L. Ng: Point Matching Computation of Transverse Resonances 155

P. Daly: Finite Elements for Field Problems in Cylindrical Co-ordinates 169

M. Ikegawa and K. Washizu: Finite Element Method applied to Analysis of Flow over a Spillway Crest 179

K. Hellan: On the Unity of the Constant Strain/Constant Moment Finite Element Methods . . . 191

E. D. Martin: Direct Numerical Solution of Three-dimensional Equations containing Elliptic Operators 201

K. J. Bathe and E. L. Wilson: Solution Methods for Eigenvalue Problems in Structural Mechanics . 213

R. S. Barsoum: A Convergent Method for Cyclic Plasticity Analysis with Application to Nuclear Components 227

S. Patnaik: An Integrated Force Method for Discrete Analysis 237

E. Grodtkjær: A Direct Integral Equation Method for the Potential Flow about Arbitrary Bodies . 253

S. K. Sen and P. L. Gould: Criteria for Finite Element Discretization of Shells of Revolution . . 265

G. A. Julien and M. A. Sid-Ahmed: A Computer Program for Filter Design having Arbitrary *Magnitude Specifications in the Frequency Domain* 275

P. Rafalski: The Orthogonal Projection Method for the Numerical Solution of a Field Problem . 287

SHORT COMMUNICATIONS

J. Sucec and A. Kumar: Transient Cooling of a Solid Cylinder by Combined Convection and Radiation at its Surface 297

G. K. Gupta: Discussion of a Paper by D. H. Ferriss 303

D. H. Ferriss: Reply to the Discussion by G. K. Gupta on my Paper 304

S. Gopalacharyulu: A Higher Order Conforming, Rectangular Plate Element 305

B. M. Irons: Comment on Preceding Article 308

G. D. Raithby: Discussion of a Paper by A. K. Runchal 309

A. K. Runchal: Author's Reply 310

I. J. Somervaille: A Technique for Mesh Grading Applied to Conforming Plate Bending Finite Elements 310

Book Review 312

Issue No. 3, 1973

E. G. Thompson and M. I. Haque: A High Order Finite Element for Completely Incompressible Creeping Flow 315

T-C. Chang and R. R. Craig Jnr.: Computation of Upper and Lower Bounds to the Frequencies of Elastic Systems by the Method of Lehmann and Maehly 323

A. Razzaque: Program for Triangular Bending Elements with Derivative Smoothing 333

R. J. Collins: Bandwidth Reduction by Automatic Renumbering 345

J. T. Oden and R. B. Fost: Convergence, Accuracy and Stability of Finite Element Approximations of a Class of Non-linear Hyperbolic Equations 357

A. F. Emery and C. M. Segedin: Singularity Programming: A Numerical Technique for Determining the Effect of Singularities in Finite Difference Solutions Illustrated by Application to Plane Elastic Problems 367

M. A. O'Brien, J. J. Fitzgerald and E. C. Dillon: Application of the Fast Fourier Transform to Linear Systems in Civil Engineering 381

R. Kinns: Spectral Analysis on a Small Computer 395

E. L. Palacol and E. L. Stanton: Anisotropic Parametric Plate Discrete Elements 413

Y. Yamamoto and N. Tokuda: Determination of Stress Intensity Factors in Cracked Plates by the Finite Element Method 427

SHORT COMMUNICATIONS

I. Hirai, T. Yoshimura and K. Takamura: On a Direct Eigenvalue Analysis for Locally Modified Structures 441

D. Radaj: Accuracy of the Finite Element Analysis for the Elastic Plate with a Circular Hole . 443

R. G. Vos: Note on the Residual Force Method—Comment on Reference 1 446

O. C. Zienkiewicz: Reply to Comment by R. G. Vos 447

J. T. Tills and B. Kaplan: Single Point Solutions of Dirichlet Boundary Value Problems by Monte Carlo and Successive Over-relaxation 448

W. C. Carpenter: Finite Element Analysis of Bonded Connections 450

R. E. Kalaba and K. Spingarn: Numerical Solution of the Integral Equations for Optimal Sequential Filtering 451

Letters to the Editor 454

Book Reviews 456

Issue No. 4, 1973

G. J. Rogers and J. R. Smith: Mathematical Models of Synchronous Electrical Machines . . . 459

U. Meissner: A Mixed Finite Element Model for use in Potential Flow Problems 467

C. R. Calladine: A New Finite Element Method for Analysing Symmetrically Loaded Thin Shells of Revolution 475

D. Greenspan: Numerical Studies of Viscous, Incompressible Flow through an Orifice for Arbitrary Reynolds Number 489

J. E. Key: Computer Program for Solution of Large, Sparse, Unsymmetric Systems of Linear Equations 497

Y. Muda: A New Relaxation Method for obtaining the Lowest Eigenvalue and Eigenvector of a Matrix Equation . 511

D. B. Ingham: Impulsively Started Viscous Flow past a Finite Flat Plate with and without an Applied Magnetic Field 521

P. Daly and J. D. Helps: Exact Finite Element Solutions to the Helmholtz Equation 529

A. Jennings: Mass Condensation and Simultaneous Iteration for Vibration Problems 543

I. S. Raju, A. V. Krishna Murty and A. K. Rao: Sector Elements for Matrix Displacement Analysis . 553

M. Caprili, A. Cella and G. Gheri: Spline Interpolation Techniques for Variational Methods . . . 565

J. C. Bruch, Jr. and G. Zyvoloski: A Finite Element Weighted Residual Solution to One-dimensional Field Problems 577

SHORT COMMUNICATIONS

G. Gambolati: Diagonally Dominant Matrices for the Finite Element in Hydrology 587

L. Shafai and Y. S. El-Moazzen: Numerical Computations of Antenna Patterns near a Conducting Elliptic Cylinder 591

J. C. Tannehill: A Simplified Numerical Scheme for Calculating the Flow of a Chemically Reacting Gas 595

R. R. Huffman and J. Genin: An Integration Algorithm for Hyperbolic Systems having Non-zero, Non-analytic Steady-state Solutions 598

K. Bernhardt and J. R. Roy: Discussion of a Paper by F. W. Williams 601

F. W. Williams: Reply to Preceding Discussion 602

S. J. Farlow: A Computer Program to find Analytical Solutions of Second Order Linear Differential Equations 603

Book Reviews 606

Table of Contents, Volume 6 611
